PRECAUTIONS / SAFETY WARNINGS 1

Please read this manual carefully before using your **UT250-101** and keep it handy for future reference. These safety instructions are to ensure the long life of your **UT250-101** and to prevent fire and shock hazards. Please read them carefully and heed all warnings.

1.1 GENERAL

- Qualified ALTINEX service personnel or its authorized representatives must perform all service.

1.2 HANDLING

- Handle the **UT250-101** carefully. Dropping or jarring can damage the unit.
- To prevent fire or shock, do not expose this unit to water or moisture. Do not place the **UT250-101** in direct sunlight, near heaters, or heat-radiating appliances, or near any liquid. Exposure to direct sunlight, smoke, or steam can harm internal components.
- Never restrict the airflow through the vents.
- Do not pull any cables that are attached to the **UT250-101**.
- Do not place heavy objects on top of the **UT250-101**.
- If the **UT250-101** is not used for an extended period, disconnect the adapter from the wall to avoid fire, shock, and loss of power.

1.4 CLEANING

- Unplug the **UT250-101** adapter before cleaning.
- Clean only with a dry cloth. Never use strong detergents or solvents such as alcohol or thinner. Do not use a wet cloth or water to clean the unit.

1.5 FCC NOTICE

- This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
- This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with instructions found herein, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
- Any changes or modifications to the unit not expressly approved by ALTINEX, Inc. could void the user's authority to operate the equipment.

ABOUT YOUR UT250-101

2

UT250-101

Under Table 8x4 VGA+Audio Matrix Switcher with "Show Me" Keys+RS-232 Auto-Switcher

The **UT250-101** is an 8x4 Video+Audio Matrix Switcher designed to be mounted under a table as part of an integrated audiovisual system. The **UT250-101** provides great flexibility for routing multimedia signals from a single, convenient location. Under Table solutions are ideal for situations where it is too expensive or impractical to install equipment directly into the furniture.

The **UT250-101** accepts 8 computer/YPbPr video inputs and 8 stereo inputs. The audio inputs accept both left and right audio, and then combine them to create a mono signal. The 4 video outputs function as 2 independent dual outputs where any input can be routed to 2 or all 4 of the video outputs. Each of the 4 outputs can be switched independently using RS-232 control. The audio output follows the last switched input and delivers a balanced mono output on both the left and right channels.

Input-to-output switching can be made from one or all of the following methods: RS-232, contact closures, auto-switching. RS-232 control is accomplished from a computer or controller using the RS-232 bus. Contact closures with LEDs ("Show Me" keys) allow manual switching through the Output Select Control inputs on the front of the unit. These controls are designed for use with momentary switches having built-in LEDs. Any input can be switched to either, or both, of the dual outputs and the LEDs show which connections are active. The **UT250-101** can also be configured for auto-switching. In Auto-Switch mode, the **UT250-101** automatically switches to the lowest number input with an active video signal applied. Any selections made by a user from the Output Select Control input override the Auto-Switch feature.

In addition to standard video and audio outputs, the **UT250-101** also has a 4TP (4 Twisted Pair) output for each video output. These 4TP outputs can be used with a compatible Twisted Pair receiver, like the TP115-111, to transmit the video and audio signals over long distances to remote projectors or other multimedia presentation systems.

The latest generation of Twisted Pair devices uses an innovative, patented technology* developed by ALTINEX. The new signal processing technology allows transmitting and receiving fully equalized computer video signals, stereo, and audio signals over long distances.

* US Patent 7,065,190

TECHNICAL SPECIFICATIONS **3**

Specifications are subject to change.
See www.altinex.com for up-to-date information.

FEATURES/ DESCRIPTION	UT250-101
Input Connectors	
Computer Video	15-pin HD female (8)
Stereo Audio (<i>mono out</i>)	3.5 mm female (8)
Power (<i>use one only</i>)	2-pin terminal block (1) and 2.5 mm jack (1)
Output Connectors	
Computer Video	15-pin HD female (4)
Mono Audio	5-pin terminal block (1)
Twisted Pair Video + Audio	RJ-45 female (4)
Control Connectors	
RS-232	5-pin terminal block (1)
Output Select	5-pin terminal block (8)
Compatibility	
Signal Types	RGBHV, RGBS, RGsB
Video Signal Resolutions	VGA through UXGA 480p through 1080p

PRODUCT DESCRIPTION

4

APPLICATION DIAGRAMS

5

DIAGRAM 1: TYPICAL SETUP

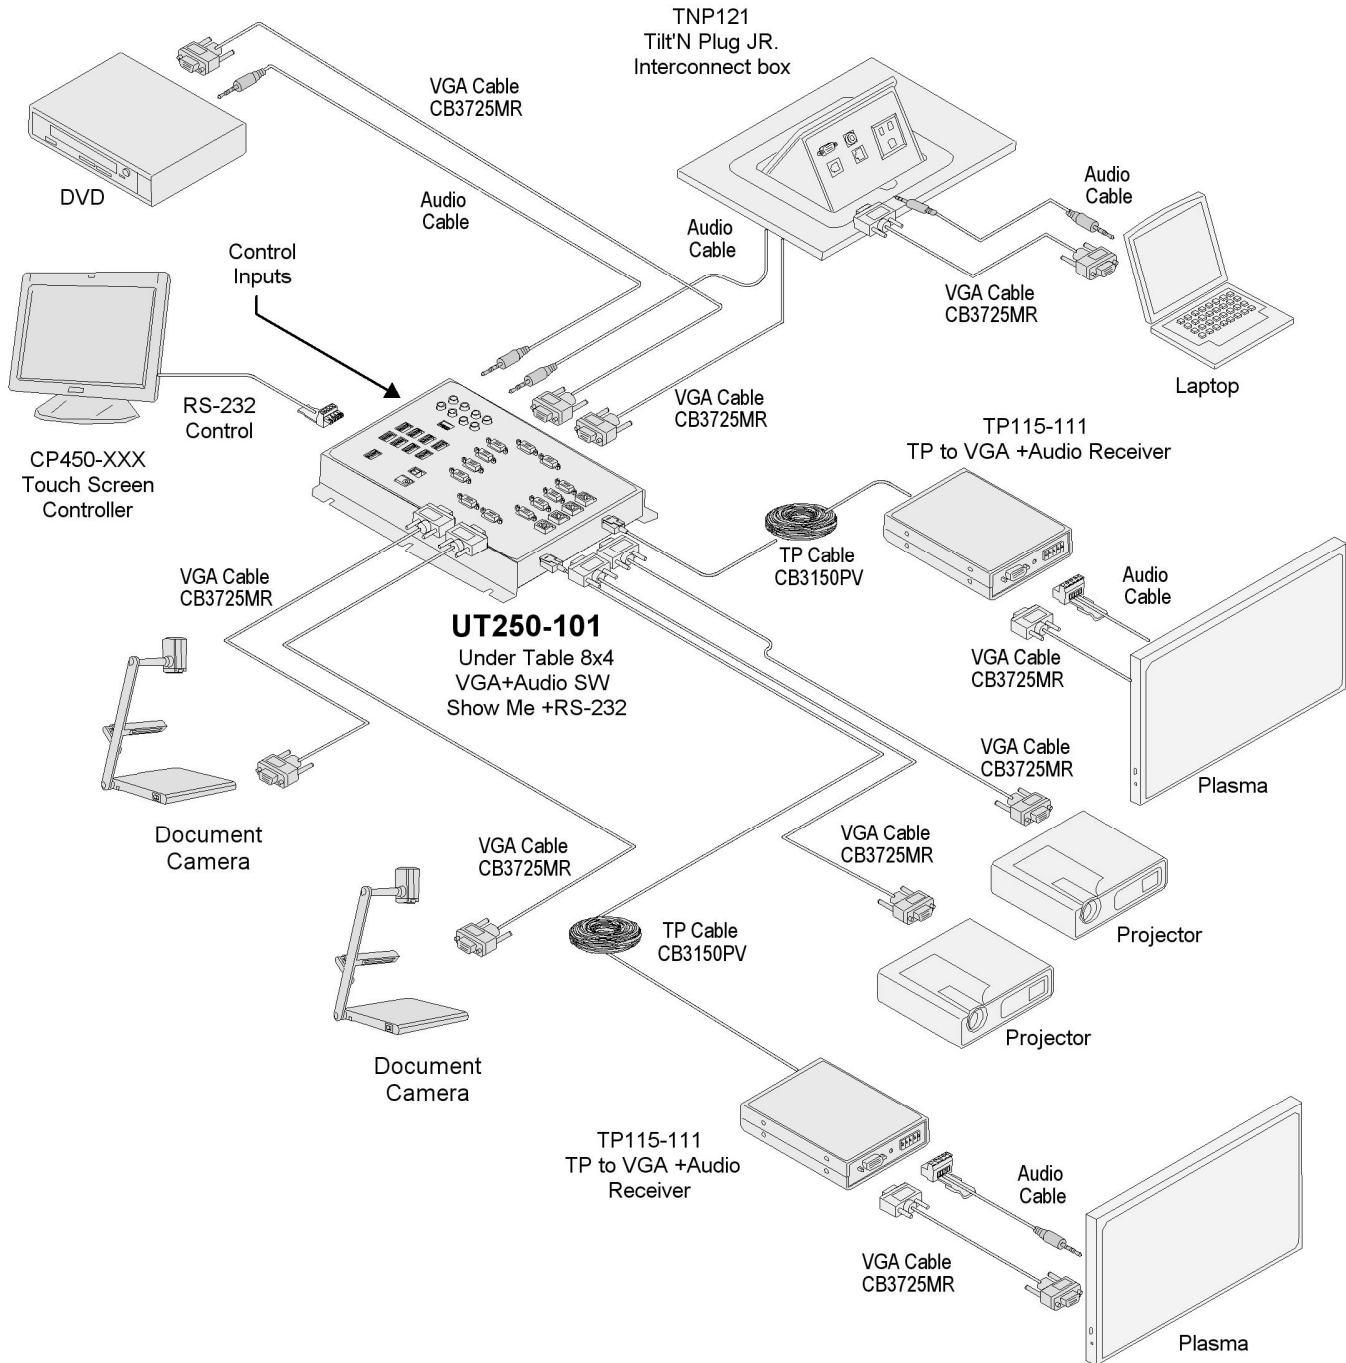

DIAGRAM 2: INTERNAL VIEW

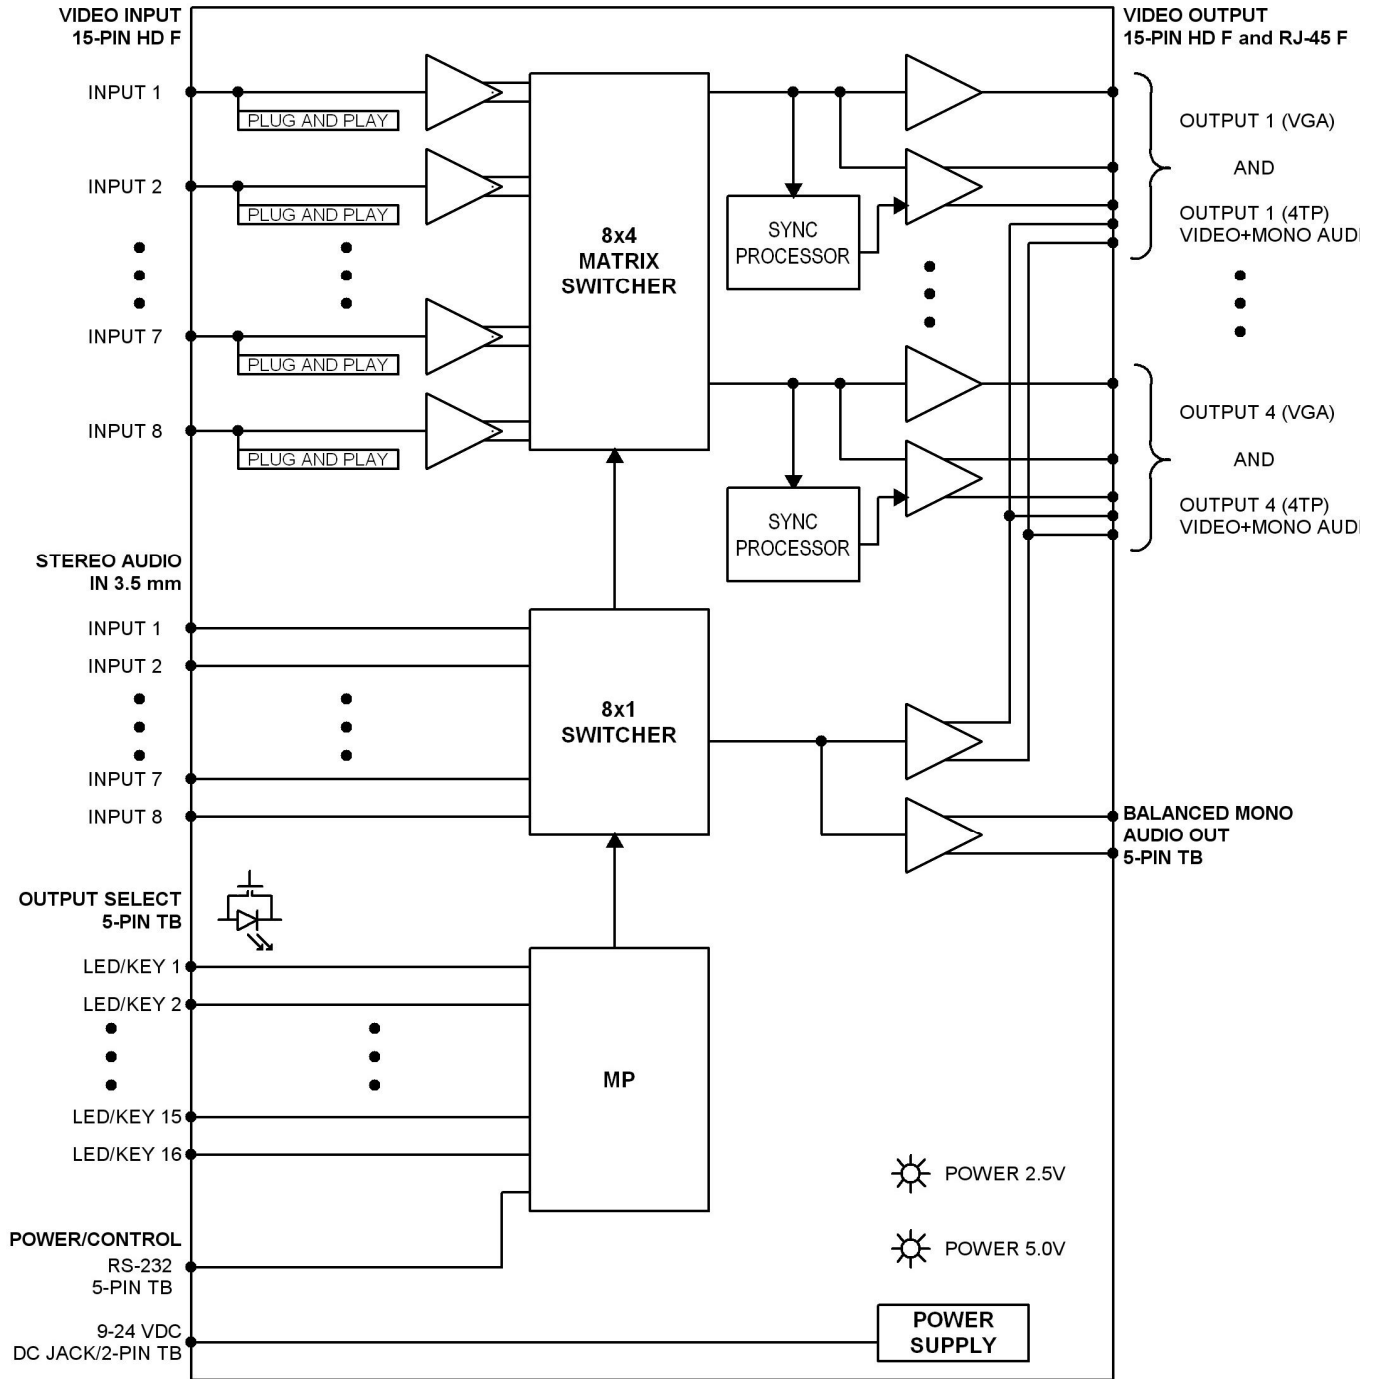

DIAGRAM 3: DIMENSIONS

DIAGRAM 4: CABLE SUPPORT

DIAGRAM 5: INSTALLATION

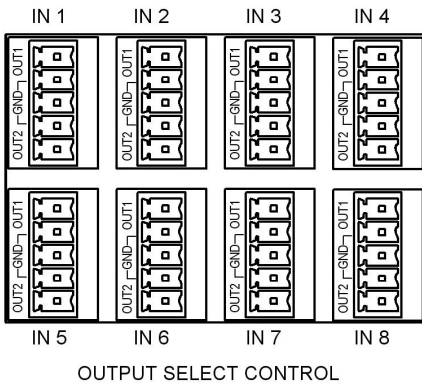

DIAGRAM 6: OUTPUT SELECT WIRING

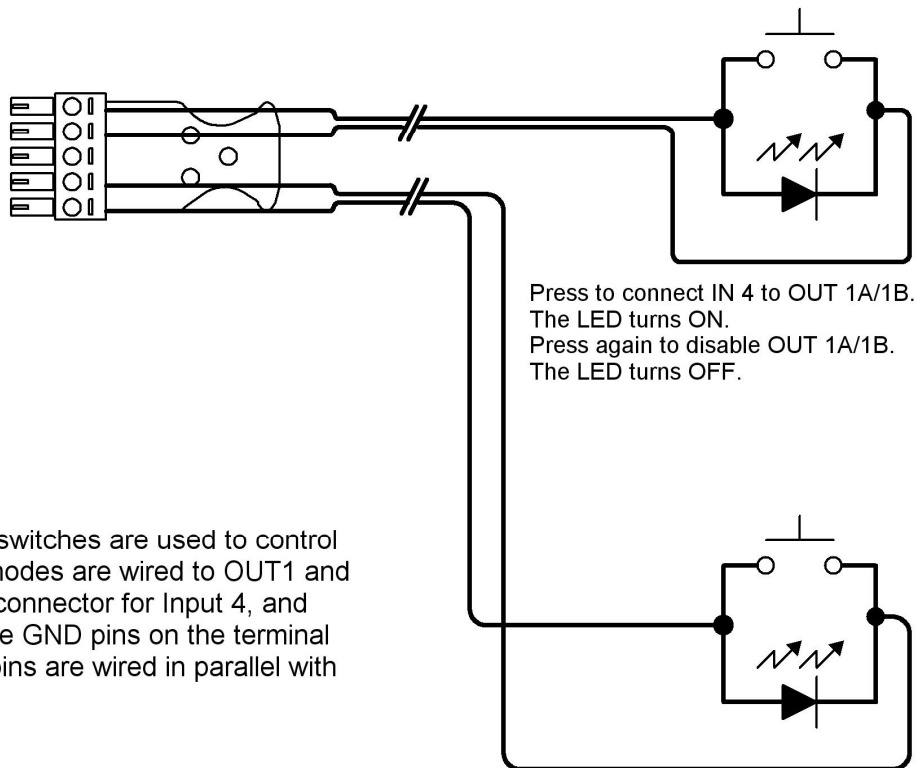

Each input has 2 Output Select Controls. One for Outputs 1A and 1B, and another for Outputs 2A and 2B.

The switch and LED are wired in parallel and serve to make input-to-output connections as well as disable the output if already selected.

EXAMPLE

In this example, illuminated switches are used to control the UT250-101. The LED anodes are wired to OUT1 and OUT2 of the terminal block connector for Input 4, and the cathodes are wired to the GND pins on the terminal block. The contact closure pins are wired in parallel with the LED.

Press to connect IN 4 to OUT 1A/1B. The LED turns ON. Press again to disable OUT 1A/1B. The LED turns OFF.

Press to connect IN 4 to OUT 2A/2B. The LED turns ON. Press again to disable OUT 2A/2B. The LED turns OFF.

INSTALLING YOUR UT250-101 6

Step 1. Decide how the **UT250-101** will be controlled: using contact closures on the Output Select Controls, through computer control using the RS-232 input, using auto-switching, or all 3 methods.

If using the Output Select Controls, see Diagram 6 for wiring information.

Step 2. Locate the best position for the **UT250-101**, but do NOT mount it to the surface until all the cables are prepared.

Step 3. Prepare the mating cables using high-quality cables for best results and durability. Make sure the cables are long enough to allow for a service-loop and so the cables can be neatly routed beneath the table to their destinations.

Step 4. Secure the unit under the table using the screws provided with the unit.

Step 5. Make all necessary connections to the **UT250-101**.

Step 6. When making connections to the terminal blocks (audio out, control, RS-232, etc.), use 24-28 AWG stranded wire for best results. Also, use multi-conductor cable where possible. For example, a standard 4-conductor cable works well for the RS-232 connection.

Step 7. Use the cable clamps provided to secure the cables to the bottom of the table/desk. Do NOT bend the cables too sharply

Step 8. Attach the cable support to the **UT250-101** as shown in Diagram 5. This will help alleviate the strain of the cables pulling from the connectors and protect the cables from being accidentally pulled free or damaged.

Step 9. After power is applied to the **UT250-101**, the unit is operational.

OPERATION 7

7.1 MANUAL CONTROL

7.1.1 OUTPUT SELECT CONTROLS

The Output Select Control inputs on the front of the **UT250-101** allow 8 users direct control of video switching. In this method, each user typically has a control panel with 2 illuminated switches along with video and audio inputs. (See Diagram 6 for details and wiring information.)

When a user presses a control switch, the video and audio from that control panel are displayed at the output of the **UT250-101**. Each switch connects its corresponding input to 2 outputs, either 1A/1B, or 2A/2B. Once the connection is made, the LED for that switch turns on. If the switch's LED is on and the switch is pressed, the output is disabled and the LED turns off. The audio output follows the last video input selected.

7.1.2 AUTO-SWITCH MODE

In Auto-Switch mode, the **UT250-101** automatically switches to the lowest input number with an active signal applied. For example, if there is a signal on Input 4 and a new signal is applied to Input 2, the outputs defined with the Auto-Switch command will switch to Input 2.

The Output Select Control inputs override Auto-Switch mode. When a user selects an input using an external switch, the **UT250-101** automatically switches to the selected input.

In Auto-Switch mode, Input 8 is designed for use as a logo input that displays when the system is not in use. If Auto-Switch mode is enabled then overridden by the Output Select Control inputs, when all active inputs are removed from Inputs 1-7, the **UT250-101** automatically switches to Input 8.

Auto-Switch mode must be set using the RS-232 input. See the AUTO commands in the following section for details.

7.2 RS-232 CONTROL

The **UT250-101** has many advanced remote-control capabilities accessible through standard RS-232 communication. Control may be accomplished through a computer, control system, or any device capable of RS-232 communication.

7.2.1 RS-232 INTERFACE

The control commands for the **UT250-101**, are in a simple ASCII character format.

1. Square brackets “[]” are part of the command.
2. Use uppercase letters for all commands.
3. Spaces are not legal characters.

Commands instruct the **UT250-101** to perform specific actions or request information. Some commands do both simultaneously. A command that instructs the **UT250-101** only to perform an action will generate feedback of “[]”. The open bracket immediately followed by a closed bracket indicates the card received a valid command. If the command requested information, the feedback generated by the **UT250-101** is the acknowledgement of having received a valid command. Invalid commands generate feedback that includes “ERR” plus an error code.

Example: [ERR001] Error number

Commands ending in “S” will be saved into memory. Commands not ending in “S” will still be executed, but will not be restored when the system is reset or powered off, then on.

7.3 DESCRIPTION OF COMMANDS

Each command consists of a function name and an optional unit ID. Unit IDs are required if 2 or more **UT250-101s** are to be controlled individually over the same RS-232 bus. The unit ID can be changed using the [SID] and [RSI] commands that are described later.

Example: [ONU2]

ON = Function

U2 = Unit ID (only U2 executes ON)

Unit ID “U0” does not need to be included at the end of a command string.

Example:

[ON]: Executed by U0

[ONU0]: Executed by U0

NOTE: Examples in this manual assume the unit ID is U0 and do NOT include the unit ID. If needed, the unit ID for any unit can be specified at the end of the command string as shown above.

1. [STATUS]

This command displays the status of the unit.

Command Format: [STATUS]

Example:

Send the command [STATUS] to receive feedback similar to the following:

Note: Preset connections are displayed as already executed, but do not take effect until after the [SW] switch command is executed.

```
OUT 1A - IN 1 ON
OUT 1B - IN 1 ON
OUT 2A - IN 1 ON
OUT 2B - IN 1 ON
AUDIO OUT - IN 1 ON
AUTO_SWITCH - OFF
```

If there is no card in slot 4, sending the [C4] command will not return any feedback.

2. [CLR]

This command resets the **UT250-101** to the last saved configuration.

Command Format: [CLR]

Example:

Clear the **UT250-101** by sending [CLR]. Any commands that were sent to the **UT250-101** using the [...S] option will be recalled using this command.

3. [VER]

This command displays the model number, firmware version, and unit ID.

Command Format: [VER]

Example:

Send the command [VER], and the **UT250-101** will return feedback similar to the following:

[UT250-101 690-0268-001 U0]

UT250-101 = the model number

690-0268-001 = the firmware version

U0 = the unit ID

4. [ONmX]

This command turns on one or more outputs.

Command Format: [ONmX]

m = Output No. (m = 1 or 2)

X = Channel No. (X = A, B, or blank for both)

Example:

Turn on Output 1A by sending [ON1A] to the **UT250-101**. Outputs 1B, 2A, and 2B are unaffected.

Turn on Outputs 2A and 2B by sending [ON2] to the **UT250-101**. Outputs 1A and 1B are unaffected.

5. [ON]

This command turns on all outputs.

Command Format: [ON]

Example:

Send [ON] to the **UT250-101** and all 4 outputs (1A, 1B, 2A, and 2B) will be enabled.

6. [OFFmX]

This command turns off one or more outputs.

Command Format: [OFFmX]

m = Output No. (m = 1 or 2)

X = Channel No. (X = A, B, or blank for both)

Example:

Turn off Output 1A by sending [OFF1A]. Outputs 1B, 2A, and 2B are unaffected.

Turn off Outputs 2A and 2B by sending [OFF2]. Outputs 1A and 1B are unaffected.

7. [OFF]

This command turns off all outputs.

Command Format: [OFF]

Example:

Send [OFF] to the **UT250-101** and all 4 outputs (1A, 1B, 2A, and 2B) will be disabled.

8. [InOmX]

This command connects one input to one output.

Command Format: [InOmX]

n = Input No. (n = # from 1 to 8)

m = Output No. (m = 1 or 2)

X = Channel No. (X = A, B, or blank for both)

Example:

Connect Input 7 to Outputs 1A and 1B and then Input 6 to Output 2A by sending the commands [I7O1] and [I6O2A]. The first command connects Input 7 to both channels of Output 1. The second command connects Input 6 to Output 2 Channel A only.

9. [InO*]

This command connects one input to all outputs.

Command Format: [InO*]

n = Input No. (m = # from 1 to 8)

Example:

Connect Input 1 to all outputs by sending [I1O*]. Input 1 is then connected to Outputs 1A, 1B, 2A, and 2B.

10. [...P]

This command sets the path for switching the outputs, but it is not active until the switch command, [SW], is executed. Switching commands ending in "P" are not executed immediately. The path for outputs on multiple units or the same unit can be preloaded.

Example:

See the example for the [SW] command that follows.

11. [SW]

This command immediately connects inputs and outputs previously set with the PATH command. The command switches all paths set on one or more units on the RS-232 bus.

Example:

[I1O1AP] Nothing is physically switched.

[I2O1BP] Nothing is physically switched.

[SW] Inputs 1 & 2 are switched simultaneously.

12. [AUTO*]

This command enables auto-switching to all outputs. The **UT250-101** automatically connects the lowest numbered input with an active video signal to all outputs: 1A, 1B, 2A, and 2B. Auto-switching is automatically disabled when an input is received on the Output Select Control inputs.

Example:

Send the command [AUTO*] to the **UT250-101**. If a video input signal is connected to any of the inputs, that signal will be connected to all the outputs. A valid video signal on Input 1 takes precedence over Input 2, Input 2 over Input 3, and so on.

13. [AUTO0]

This command disables auto-switching.

Example:

Disable auto-switching mode by sending the command [AUTO0].

14. [AUTO1]

This command enables auto-switching to Output 1. The **UT250-101** automatically connects the lowest numbered input with an active video signal to Outputs 1A and 1B. Outputs 2A and 2B remain unchanged. Auto-switching is automatically disabled when an input is received on the Output Select Control inputs.

Example:

Send the command [AUTO1] to the **UT250-101**. If a video input signal is connected to any of the inputs, that signal will be connected to Outputs 1A and 1B only. A valid video signal on Input 1 takes precedence over Input 2, Input 2 over Input 3, and so on.

15. [AUTO2]

This command enables auto-switching to Output 2. The **UT250-101** automatically connects the lowest numbered input with an active video signal Outputs: 2A and 2B. Outputs 1A and 1B remain unchanged. Auto-switching is automatically disabled when an input is received on the Output Select Control inputs.

Example:

Send the command [AUTO2] to the **UT250-101**. If a video input signal is connected to any of the inputs, that signal will be connected to Outputs 2A and 2B only. A valid video signal on Input 1 takes precedence over Input 2, Input 2 over Input 3, and so on.

16. [HELP]

This command displays information available for the **UT250-101** interface commands.

Command Format: [HELP]

Example:

In order to display the RS-232 commands available for the **UT250-101**, send the command [HELP]. The commands along with a brief description will be displayed.

17. [?]

This command displays general information about a unit and its status.

Command Format: [?]

Example:

Send the command [?] to receive feedback status similar to the following.

```
[(UT250-101U0)(VR690-0268-001U0)
(MA1111U0) (ON1111U0)]
```

The feedback is broken down as follows:

```
(UT250-101U0)
(VR690-0268-001U0)
(MA1111U0)
(ON1111U0)
```

All status feedback is enclosed in brackets, "[]". Each data field within the status is enclosed in parentheses. The first two characters identify the status type. The last two characters are the unit's ID.

UT250-101	= Model number
VR690-0268-001	= Firmware version
MA1111	= Matrix connections
ON1111	= Output ON/OFF status

The I/O connections are read left to right representing the four outputs (1A, 1B, 2A, 2B) and the input to which each is connected. The first digit shows the input number to which Output 1A is connected. The second digit is for Output 1B, and so on.

The ON/OFF status line is also read from left to right as Outputs 1A, 1B, 2A, and 2B. A "1" indicates the output is on and a "0" indicates the output is off.

18. [STA1]

This command enables automatic feedback. The command affects all units with auto-feedback capability, not just the **UT250-101**. The default is STA0, off.

Command Format: [STA1]

Example 1:

```
Command = [OFF]
Feedback = (ON0000U0)
ON = Output ON/OFF status
0000 = Out 1-4 = OFF
U0 = Unit ID is U0
```

Example 2:

```
Command = [ON1A]
Feedback = (ON1000U0)
ON = Output ON/OFF status
1000 = Out 1=ON, 2-4=OFF
U0 = Unit ID is U0
```

19. [STA0]

This command disables automatic feedback. The command affects all units with auto-feedback capability, not just the **UT250-101**. The default is STA0, OFF.

Command Format: [STA0]

20. [...S]

This command saves the configuration command being sent in memory. Send the command [I1O*S] to switch IN 1 to all outputs and save the setting. After power-up or [CLR], IN 1 will be connected to all outputs.

21. [AFB]

This command enables/disables the command acknowledgement feedback, “[]”, from the **UT250-101**. This setting is automatically saved to memory and can only be changed by sending the [AFB] command a second time. Use this command when sending a large number of commands with no delays, or when repeatedly sending commands with no delays.

Command Format: [AFBm]

m = 1 for ON, 0 for OFF

Example:

Send 16 commands to the **UT250-101** to initialize the card. The required commands are as follows:

[I1O1A],
[I2O1B],
etc.

Send the [AFB] command first, and then the switching commands.

[AFB0],
[I1O1A],
[I2O1B],
etc.
[AFB1]

In the above example, the brackets, “[]”, will not be displayed after each command is executed.

22. [SIDn]

This command sets the **UT250-101** to a new unit ID. When assigning multiple IDs to several units, connect only one unit at a time to the RS-232 bus.

Command Format: [SIDn]

n = Unit ID (n = # from 1 to 9)

Example:

There are two **UT250-101** units on the RS-232 bus, but they need to be controlled individually. Connect only the first unit to the bus and then send [SID1]. This unit is now U1. Disconnect the first unit and connect the second unit. Now send [SID2] to the second unit. The second unit is now U2.

23. [RSI]

This command resets the unit ID to U0.

Command Format: [RSI]

Example:

Send the command [RSI] to reset unit ID U1 assigned above back to U0.

7.4. SUMMARY OF COMMANDS

- 1) [STATUS] Display card status
- 2) [CLR] Reset card to defaults
- 3) [VER] Display firmware version
- 4) [ONmX] Turn ON single output
- 5) [ON] Turn ON all outputs
- 6) [OFFmX] Turn OFF single output
- 7) [OFF] Turn OFF all outputs
- 8) [InOmX] Connect to one output
- 9) [InO*] Connect to all outputs
- 10) [...P] Sets the path, [SW] preload
- 11) [SW] Switch preloaded outputs
- 12) [AUTO*] Auto-switch: ON, all outputs
- 13) [AUTO0] Auto-switch: OFF
- 14) [AUTO1] Auto-switch: ON, Out #1
- 15) [AUTO2] Auto-switch: ON, Out #2
- 16) [HELP] Display available commands
- 17) [?] Display system information
- 18) [STA1] Auto-feedback on
- 19) [STA0] Auto-feedback off
- 20) [...S] Save current setting
- 21) [AFB] Enable/disable “[]”
- 22) [SIDn] Set all Card IDs
- 23) [RSI] Reset Card IDs to defaults

TROUBLESHOOTING GUIDE

8

We have carefully tested and found no problems in the supplied **UT250-101**; however, we would like to offer suggestions for the following:

8.1 POWER LEDS ARE OFF

Cause 1: The unit is not plugged in.

Solution: Make sure the power adapter is plugged into a working AC outlet and that the adapter's DC end is plugged all the way into the **UT250-101**. If both LEDs are still not ON, see Cause 2.

Cause 2: The unit has a problem.

Solution: If one power LED is on, but the other is not then the **UT250-101** may have a problem. Please call ALTINEX at (714) 990-2300.

8.2 NO DISPLAY

Cause 1: The source has a problem.

Solution: Check the source and make sure that there is a signal present and all source connections are correct. If the source is working and there is still no display, see Cause 2.

Cause 2: The output is not selected.

Solution: Verify the connection status of the **UT250-101**. (See RS-232 accessible commands in Section 7.) If no display is present, see Cause 3.

Cause 3: Cable connections are incorrect.

Solution: Make sure that cables are properly connected. Also, make sure that the continuity and wiring are good. If there is still no display present, see Cause 4.

Cause 4: The display has a problem.

Solution: Make sure the display is powered and turned on. If there is still no display, please call ALTINEX at (714) 990-2300.

8.3 NO RESPONSE

Cause 1: The unit is not recognized.

Solution: Reset the unit by turning the system power off and then on again. Send the [STATUS] command to see if there is communication with the unit. If there is no feedback, see Cause 2.

Cause 2: Unit is disconnected from RS-232.

Solution: Check the RS-232 connection to the unit. Make sure the terminal block connector is pushed all the way in and that all the wires are connected. If the unit is still not recognized, see Cause 3.

Cause 3: Communication settings are bad.

Solution 1: Verify the communication software settings. The **UT250-101** default settings are as follows:

Baud Rate.. 9600 Flow..... None
Data Bits..... 8 Parity None
Stop Bits..... 1

Solution 2: Verify the correct port is selected in the communications software: COM1, COM2, etc. If there is still a problem, please call ALTINEX at (714) 990-2300.

8.4 NO SOUND/SOUND TOO LOW

Cause 1: The source has a problem.

Solution: Check the source and make sure that it is working at an appropriate volume level and all source connections are correct. If the source is working and there is still no sound, see Cause 2.

Cause 2: The wrong output is selected.

Solution: Check the status of the unit using the RS-232 commands in section 7. Verify the correct input-to-output connection is selected and enabled. If no sound is present, see Cause 3.

Cause 3: Cable connections are incorrect.

Solution: Make sure that cables are connected properly. Also, make sure that the continuity and wiring are good. If there is still no sound present, see Cause 4.

Cause 4: Destination amplifier has a problem.

Solution 1: Make sure that the destination amplifier is powered. If there is still no sound, see Solution 2

Solution 2: Set the volume of the destination amplifier to a reasonable level. If there is still no sound, see Solution 3.

Solution 3: If the video output is working and only the audio is missing, there may be a problem with the **UT250-101**, call ALTINEX at (714) 990-2300.

8.5 NO TWISTED PAIR OUTPUT

Cause 1: The output is not selected.

Solution: The TP output is the same as the VGA output. Verify the connection status of the **UT250-101**. (See RS-232 accessible commands in Section 7.) If no display is present at the TP receiver, see Cause 2.

Cause 2: No input signal applied.

Solution: Make sure that the selected input has a valid image applied. Connect a local monitor to the VGA output of the **UT250-101** that corresponds to the TP output. If an image is present, there may be a problem with the **UT250-101**. Call ALTINEX at (714) 990-2300.
